Ringmärkningsrapport för 2016

Rolf Larsson & Tony Svensson

På Torhamns fågelstation märktes under året 6910 fåglar och på Utklippan 6544 fåglar. I övriga östra Blekinge märktes 2468 fåglar, bl.a. i samband med olika projekt. Bland noterbara och udda fåglar finns arter som hökugla, sibirisk järnsparr, vitgumpad buskskvätta och rekordnoteringen på elva taigasångare.

Bland anmärkningsvärda återfynd så topper skärsnäppan som märktes på Svalbard och kontrollerades på Utklippan.

Projekt som ingår i länsstyrelsens regionala miljöövervakning

Ejder

Antalet häckande ådor på Södraskär och Hamnskär ökade anmärkningsvärt mellan 2013 (163 bon) och 2014 (222 bon), en ökning med 36 procent.

Störningarna från havsörnarna minskade markant i och med att människor uppehöll sig ständigt på Södraskär och att Norraskär besöktas då och då. I början av maj sågs många ådor ligga på vattnet runt öarna. De uppvaktades flitigt av gudingarna och man kan anta att en del av dessa ådor var i färd med att lägga om.

På grund av predationen från havsörnarna räknades vad som kunde bedömas vara plundrade och övergivna reden. Totalt påträffades 57 sådana reden.

Gråtrut

Denna kraftiga nergång torde förklaras av ändrade villkor för yrkesfisket - minskat kustnära fiske och bland annat förbud mot att kasta bifängster över bord, samt bättre skötta soptippar.

Någon predation från havsörnarna kunde inte konstateras. Till skillnad från ejdern flyger en ruvande gråtrut upp från boet när en havsör närmar sig.
Kentsk tärna

Skärfäläcka

På Utklippan fängas och märks en del skärsnäppor. Arten övervintrar ofta här ute och kanske var skärsnäppan från Svalbard, som avlästes i april, en fågel som stannat på ”Klippan” hela vintern? Foto: Tony Svensson.

Summa: 266 arter

| 6910 | 6544 | 2468 | 15922 | 924.196 | 194 | 12872 |
Återfynd

Under året inkom 194 återfynd av 49 arter. Kontroller av egna märkningar från 2015 och 2016 inom ett avstånd av 10 km från märklokalen har inte specificerats. Vid beräkningen av det sammanlagda antalet återfynd enligt tabell 1 har klubbens egna kontroller medtagits, såvida dessa gjorts mer än tre månader efter märkningen. Återfynden har sammanförts artvis per land, vilka i sin tur i möjligaste mån ordnats från norr till söder och med växande avstånd från märkningsområdet.

Symboler och förkortningar

pull    Unge på häckplatsen, oflygg eller nyligen flygg
10     Fågel under sitt första kalenderår
1+     Årsunge eller äldre
20     Fågel under sitt andra kalenderår
2+     Fjolåring eller äldre
M      Hanne
F      Hona
=      Häckande
+      Skjuten
(+)    Dödad av människa
+K     Dödad av katt
x      Funnen död
(x)    Funnen sjuk eller skadad, senare avladen
xA     Funnen död i förrottelse, som skelett, fot med ring etc.
v     Fångad och släpåt med sin ring
r     Endast ringen funnen
()     Fångad och släpåt utan ring
(v)    Fångad och släpåt med ny ring
c?     Fångad, dess vidare öde okända
(?)    FYndsätt obekant
avl    Ring avläst utan fångst

Datum inom parentes anger rapportbrevets datering, då upphittaren inte angett återfyndsdatum. Om landskap ej anges så avses Blekinge.
